

Rajneesh Kumar

React Native Engineer — High-Performance, AI driven Mobile Apps (5+ Years)

India | +91 9808532935 | rajneesh.kumar.work@gmail.com | [linkedin.com/in/rajneeshkumar94](https://www.linkedin.com/in/rajneeshkumar94)

PROFESSIONAL SUMMARY

React Native Engineer with 5+ years of experience delivering secure, scalable, and high-performance mobile applications for enterprise and product environments. Specialized in React Native (Bare workflow), advanced state management, mobile security (SSL pinning, root/jailbreak detection), performance optimization (cold start, memory profiling, render tuning), and CI/CD automation. Experienced in mobile build & release processes (Play Console, App Store Connect, TestFlight), code signing, and provisioning profiles. Currently exploring Prompt Engineering, Generative AI integrations (OpenAI, LLM-based features) to build intelligent mobile experiences.

CORE TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Mobile: React Native (Bare), React.js, React Navigation, New Architecture (Fabric & TurboModules) and Architecture is feature-based modularization, Separation of concerns

State Management: Redux Toolkit, Zustand, Context API

APIs: REST APIs, Axios, RTK Query, OpenAI API, GenAI (LLM Integration)

Security: SSL Pinning, Root/Jailbreak Detection

Mobile Features: Deep Linking (Universal Links, Android App Links), Push Notifications, Firebase Crashlytics, Google Maps, Biometric, Social Logins, MMKV, AsyncStorage

Testing: Jest, React Native Testing Library

DevOps/CI-CD: GitHub Actions, Fastlane, Automated Build & Release

Mobile Build & Release Tooling: Android Studio, Xcode, Gradle, Play Console, App Store Connect, TestFlight

Build Configuration: Flavors, Build Variants, iOS Schemes, Environment-based Builds

Code Quality: ESLint, Prettier, Husky, lint-staged

Performance & Reliability: Crash-free Sessions, Cold Start Optimization, Memory Profiling, Hermes.

Methodologies: Agile / Scrum

PROFESSIONAL EXPERIENCE

Software Engineer — Coforge Ltd., Noida

June 2021 – Present

- Improved overall app stability by 30% by fixing memory leaks, optimizing renders, and restructuring component lifecycle flows.
- Reduced cold start / app launch time by 25% through bundle optimization, memoization, and FlatList virtualization tuning.
- Delivered banking-grade mobile security (SSL pinning, jailbreak/root detection, cert validation), achieving zero vulnerabilities in audits.
- Built AI-powered voucher module using AI APIs, boosting automation and increasing user engagement by 40% contributed to 20% YoY retention growth.

- Automated Android/iOS release pipelines using GitHub Actions + Fastlane and owned store releases via Play Console & App Store Connect (TestFlight), cutting deployment time from 3 hours to 20 minutes.
- Optimized runtime performance using memory profiling, cold-start investigation, and Hermes-based improvements, enhancing responsiveness and reducing JS execution overhead.

React Native Developer — iGent Digital Solutions Pvt. Ltd, Noida.

Jan 2020 – May 2021

- Improved app responsiveness by 35% through optimized navigation stacks, animations, and async storage management.
- Implemented push notifications that drove **28% increase in user re-engagement**.
- Integrated REST APIs with efficient caching and synchronization, **reducing API load by 22%**.
- Collaborated with backend and UI/UX teams, reducing development iterations by **30% and accelerating release timelines**.
- Assisted with build packaging and QA distribution using Android Studio/Xcode, handling Gradle/CocoaPods issues and internal testing workflows.

KEY PROJECT

iEngage — Enterprise Mobile Application

A high-scale enterprise mobility solution adopted across multiple business units.

- Implemented full-stack mobile security (SSL pinning, root detection), passing all internal security checks with zero vulnerabilities.
- Refactored state management using **Redux + Context, cutting unnecessary re-renders by 50%**.
- Optimized the app to handle high-traffic enterprise workflows with minimal latency.
- Set up CI/CD pipelines enabling one-click automated Android and iOS builds, **reducing manual effort by 80%**.
- Release & Distribution: Supported releases via Play Console and App Store Connect (TestFlight), including code signing steps and release rollout verification.
- Build Setup: Maintained flavors/build variants and iOS schemes to generate environment-specific builds (dev/uat/prod).
- Reliability & Performance: Tracked crash-free sessions and ANR trends using Crashlytics/Android vitals; performed cold start and memory profiling to resolve stability and responsiveness issues.
- Runtime: Worked with Hermes configuration and profiling-driven performance tuning for smoother interactions and startup performance.

Tech Stack: *React Native, TypeScript, Redux Toolkit, REST APIs, Context API, GitHub Actions*

EDUCATION

B.Tech – Computer Science

Dr. A.P.J. Abdul Kalam Technical University, Lucknow — 2019

Diploma – Computer Science

Board of Technical Education, Uttar Pradesh — 2016
